

## **More clarity, simple selection**

### **Standardised fittings for all OBO cable trays**

Less is more: This is proven by the standardised fittings for the OBO cable trays. They are compatible with both the classic screw-on cable tray variants as well as the Magic trays, known for their innovative plug-in system. The benefits are tangible, as this not only makes installation faster and less complicated, it also streamlines warehousing, making handling less complex.

### **Every installation challenge can be managed**

Cable trays cannot always be installed simply in a straight line. Different installation environments demand individual solutions. This is precisely where the OBO fittings come into their own, as they allow the simple creation of branches and changes of direction. The portfolio of OBO fittings consists of 90° bends, 45° bends, variable bends with individually adjustable angles, and add-on tees and T pieces which are used to create horizontal branches as well as cross-overs. For every fitting, a matching, further-optimised cover is available. All the fittings possess an integrated connection, meaning no separate connectors are required.

### **The OBO cable trays – simply installed faster**

OBO cable trays stand for efficiency, stability and safety. This applies to both the screw-on variants and the plug-in variants. The screw-on cable tray systems are simple, functional and robust. They can be used for a wide variety of applications, both indoors and outdoors. The innovative Magic systems are simply connected and engaged. Without screws, connectors or other accessories, you can noticeably increase the mounting speed. Just like the cable trays, the standardised fittings are consistently aligned to the requirements of daily installation work and offer time savings as well as simplified work.
