## **OBO flush-mounted and cavity wall boxes**

### **For everyone who loves to work efficiently**

The OBO flush-mounted and cavity wall boxes set new standards for quality and speed on every construction site with numerous clever product details. They are made of 100% halogen-free material and thus effectively reduce the release of toxic halogens in the event of fire.

#### **The flush-mounted boxes: redefining quality and speed**

With innovative product details, OBO flush-mounted boxes save time and make work easier on every building site. OBO uses high-quality recycled materials from battery production for the sustainable production of flush-mounted boxes. A finished flush-mounted box therefore has a recycled material content of 80%. This is a good example of the numerous measures that OBO has already implemented on the way to greater sustainability. Increasing the proportion of recycled material in production is an essential part of OBO's sustainability strategy.

#### **The cavity wall boxes: Setting new standards on every construction site**

But the OBO cavity wall boxes also know how to impress: they make the installation of devices and cables even more effective and time-saving. The airtight cavity wall boxes provide more peace and quiet with tested and certified sound insulation. They achieve sound insulation of 70 dB without weakening the standard drywall.
